

Principles of the Mechanics of Machinery and Engineering; Theoretical Mechanics.-V. 2. the Application of Mechanics in Buildings. Application of Mechanics to Machinery

Filesize: 2.2 MB

Reviews

*This is the finest book i have got go through right up until now. I have got read and i also am confident that i am going to planning to read once again yet again in the future. You will not truly feel monotony at at any time of the time (that's what catalogs are for about if you check with me).

Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1847 Excerpt: .a) $g = (\sin. 20) \cdot 32,2 = (0,3420 - 0,03 \cdot 0,9397) \cdot 32,2 = 0,3138 \cdot 32,2 = 10,104$ feet; hence, the final velocity of descent is, $v = \sqrt{2 \cdot 10,104 \cdot 150} = \sqrt{3031,2} = 55,54$ feet. On the horizontal plane the accelerating force is $g \cdot \sin. 0,03 \cdot 32,2 = 0,966$ feet \therefore hence, the 243. Rolling motion.--When a carriage rolls down an inclined plane, the friction of the axle chiefly acts in opposition to the accelerating force; if r be the radius of the axle, and a that of the wheel, the friction will amount to $N \cdot \frac{r}{a} = G \cos. a$, and hence a the accelerating force $p = (\sin. a - \cos. a \cdot \frac{r}{a}) G$. If a round body AB, a cylinder or sphere, for example, roll Fig. 299. down an inclined plane FH, Fig. 299, we have to consider a progressive and a rotatory motion at the same time. Generally the acceleration of the progression is equal to that of the rotation (156); since if we put the moment of inertia of the rolling body = $G y$, and the radius of the cylinder = o , we shall then obtain for the force $AK = K$, with which the cylinder is set into revolution by virtue of the penetration of its Gv parts into those of the inclined plane: $K = p \cdot \frac{y}{o}$. But the force $r \cdot \frac{r}{a} \cdot g$ acts opposed to the force for descent $G \sin. a$, hence it follows that the moving force for progressive motion = $G \sin. a - K$, $\therefore G \sin. a - K$ and the accelerating force...
