

Occurrence and Distribution of Pesticides in Surface Waters of the Hood River Basin, Oregon, 1999-2009: Usgs Scientific Investigations Report 2011-5082

Filesize: 6 MB

Reviews

This publication is definitely not simple to begin on studying but quite fun to see. It really is full of knowledge and wisdom I am just effortlessly can get a satisfaction of studying a created pdf.
(Alfreda Bradtke)

OCCURRENCE AND DISTRIBUTION OF PESTICIDES IN SURFACE WATERS OF THE HOOD RIVER BASIN, OREGON, 1999-2009: USGS SCIENTIFIC INVESTIGATIONS REPORT 2011-5082

To save **Occurrence and Distribution of Pesticides in Surface Waters of the Hood River Basin, Oregon, 1999-2009: Usgs Scientific Investigations Report 2011-5082** eBook, make sure you access the web link beneath and download the ebook or gain access to additional information that are relevant to OCCURRENCE AND DISTRIBUTION OF PESTICIDES IN SURFACE WATERS OF THE HOOD RIVER BASIN, OREGON, 1999-2009: USGS SCIENTIFIC INVESTIGATIONS REPORT 2011-5082 ebook.

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.The U.S. Geological Survey analyzed pesticide and trace-element concentration data from the Hood River basin collected by the Oregon Department of Environmental Quality (ODEQ) from 1999 through 2009 to determine the distribution and concentrations of pesticides in the basin's surface waters. Instream concentrations were compared to (1) national and State water-quality standards established to protect aquatic organisms and (2) concentrations that cause sublethal or lethal effects in order to assess their potential to adversely affect the health of salmonids and their prey organisms. Three salmonid species native to the basin are listed as threatened under the U.S. Endangered Species Act: bull trout, steelhead, and Chinook salmon. A subset of 16 sites was sampled every year by the ODEQ for pesticides, with sample collection targeted to months of peak pesticide use in orchards (March-June and September). Ten pesticides and four pesticide degradation products were analyzed from 1999 through 2008; 100 were analyzed in 2009. Nineteen pesticides were detected: 11 insecticides, 6 herbicides, and 2 fungicides. Two of four insecticide degradation products were detected. All five detected organophosphate insecticides and the one detected organochlorine insecticide were present at concentrations exceeding water-quality standards, sublethal effects thresholds, or acute toxicity values in one or more samples. The frequency of organophosphate detection in the basin decreased during the period of record; however, changes in sampling schedule and laboratory reporting limits hindered clear analysis of detection frequency trends. Detected herbicide and fungicide concentrations were less than water-quality standards, sublethal effects thresholds, or acute toxicity values. Simazine, the most frequently detected pesticide, was the only herbicide detected at concentrations within an order of magnitude (factor of 10) of concentrations that impact salmonid olfaction. Some...
